1.IMPORTANT INSTRUCTIONS

1.1 Important safely instruction

Symbols used in the Guide:

 **Note**
Tips for the correct use of the appliance

 **Important**
Directions to avoid appliance damage

 **Warning**
directions to prevent injury

1.2 Children safety

If this appliance is replacing an existing appliance which must be removed or disposed of, make sure that it does not become a dangerous trap for children by cutting its power supply cable and rendering it impossible to close the door.

Use the same caution at the end of the lifespan of the new appliance.

 **Important!**
Dimensions in parentheses are in inches.

Weights in parentheses are in pounds.

Temperatures in parentheses are in Fahrenheit degrees.

Dimensions in parentheses are in inches.

3.1 Transport to installation site and unpacking

The appliance is very heavy. Take maximum care during handling to avoid injury.

The appliance should always be transported in an erect position. Avoid at all costs leaning it on its front side.

Since this is a large and heavy appliance, before transporting the appliance, check the access to the location where it will be installed (door size, manoeuvring space in stairwells, etc.).

The appliance is attached to the base of the packaging (pallet) through four bolts which can be removed using a 17 mm (3/4") wrench.

It is recommended to use a manual transporting device to move the appliance to the installation site, and only at this point to remove the base of the packaging. The appliance should always be transported in an erect position.

If this is not possible, transport the appliance laying on its rear side.

Once at the installation site, the appliance, which is equipped with four wheels, can be taken off the pallet and positioned in the installation area.

Operate as follows:

- > Take off the four bolts securing the appliance to the pallet by means of a 17 mm (3/4") open spanner.
- > Remove the fixing brackets [3] and [4].
- > To remove the front fixing bracket [3], unscrew for one or two turns the rear wheel adjusting bolt [2] by means of a 13 mm (1/2") box spanner, avoiding too much strength while tightening the nut, which could damage the leveling feet adjusting system.
- > From the back of the unit and by means of a suitable, high duty hand trolley, take off the appliance and place it on the floor.

Be very careful to avoid any damage to floors. Delicate floors should be protected with plywood, hard cardboard or similar material panels.

3.2 Electrical and Water connection

The Built-in Fhiaba filter cannot make it safe to drink any water which is not suitable for human consumption.

The appliance should be connected only to a drinkable water supply system.

Do not use extension cords or adapters. Once the appliance has been connected to the water system, turn the Ice Maker off (touch the button on control panel to switch it off) before the main water is shut off.

A Schuko 16 A socket with an efficient grounding should be made available for the electrical mains connection, as well as an omnipolar switch which can easily be reached when the appliance is installed.

To connect to the water supply system (for appliances equipped with ice makers) a tap with a male 3/4" connection should be provided, which must also be easily accessible once the appliance is installed.

The appliance is provided with a water supply hose and seal kit which is suitable for high water pressure and complies the Food Regulations.

The water filter cartridge, which is provided with the appliance, should be installed according to the accompanying instructions.

Use only the new hose and the new gaskets which are supplied with the appliance. Discard any hose and gasket which may have already been installed.

Electrical cord length: 2,0 mt (78 3/4")

Water connection line length: 2,5 mt (98 3/8")

3. PREPARING THE INSTALLATION

ELECTRICAL AND WATER SUPPLY BEHIND THE UNIT

INTEGRATED AND CLASSIC SERIES:

X-PRO AND COUNTRY SERIES:

- > Fit one end of the water hose onto the connector at the appliance's back, using the supplied 3/4" fitting [1].
- > Fit the other end of the hose to the water tap, using the supplied 3/4" fitting [2].
- > On 0FZ models only, install the water filter support outside the appliance, using the fittings supplied (see page 49).

Back of appliance

INTEGRATED AND CLASSIC SERIES:

Back of appliance

Operate as follows:

- > Unwind the electric cable and connect it directly to the wall socket.
- > Make sure the appliance is in the Stand-by condition and that all lights are off; should it be not so press the Unit button  to switch it off.
- > Connect the water pipe to the threaded connection located at the base of the appliance [1], using the 3/4" fitting supplied.
- > Connect the hose to the tap using the 3/4" fitting supplied [2].
- > Only on 0FZ models, install the water filter support externally to the appliance, using the fittings supplied (see page 49).

Front of appliance

Operate as follows:

- > Unwind the electric cable and connect it directly to the wall socket.
- > Make sure the appliance is in the Stand-by condition and that all lights are off; should it be not so press the Unit button  to switch it off.

2

3.3 Levelling

Adjust the appliance level by means of the front levelling feet and the rear adjustable wheels.

Operate as follows:

- > After removing the bottom plinth or grille (it is kept in position by magnets), adjust the height of the levelling feet **[1]** by means of a 17 mm (3/4") open spanner.
- > Then adjust the height of the rear wheels by turning the front adjusting bolts **[2]** clockwise or anticlockwise as it may be required.
- > Remount the bottom plinth or grille.

INTEGRATED SERIES

4.1 Decorative door and bottom-drawer panels layout

The dimensions of the panels are indicated in the table and drawings on next pages.

Nevertheless, according to the requirements for aligning with other kitchen structures, the door panel can be higher than the upper edge of the refrigerator door, and the drawer panel can be lower than the edge of the drawer.

The panels must be mounted using special braces which attach to adjustable devices provided on the door and drawer and with brackets that anchor and adjust the panel's vertical direction. Braces, brackets and fixing screws are provided with the appliance and must be applied to the panel as indicated.

Operate as follows:

To prepare the panels to be mounted on the appliance, follow these steps, working on the back of the panel.

Door Panel

- > Trace, a line dividing the panel width in half **[1]**.

- > Starting from the Bottom edge of the panel, mark the positioning of the brackets **[2]**.

4. PANELS MOUNTING

> Following the corresponding table, mark the external and then the internal hole [3].

> Position the brackets on each set of marks to make sure they are aligned [4], then drill holes through the panel (pay close attention to the panel's thickness) [5].

> Screw the brackets in place [6].

Drawer Panel

> When preparing the Drawer Panel, follow the same instructions as per the door panel, but make sure measurements are taken starting from the top edge [7].

The support bracket faces the opposite way [8] (note imgs 4 and 8).

449	447 (17 5/8")	177 (6 7/8")

4.12 Mounting the handles

Handles will have to be mounted on the panels before they are applied to the fridge.

Operate as follows:

> Drill two holes on the back of the panels according to the table below [1].

1

> Place the handle on top of the holes and insert the screws through the panel and into the handle support [2].

2

ø30 mm	HANDLE PRODUCT CODE			
	HV	H08	H07	H05
Length A	1104 mm (43 1/2")	794 mm (31 1/4")	644 mm (25 3/8")	494 mm (19 5/8")

Series	899 749 599 449	899	749	599

4.13 Mounting panels to the door and the drawer

Once all brackets and small brackets have been applied to the panels, you can begin installing the bottom drawer.

Operate as follows:

> Partially tighten the screw to the fixing [1].

1

> Hook the bottom drawer panel starting from the fixings on the bottom [2].

2

4. PANELS MOUNTING

> It is now possible to align panels to adjacent cabinets in height using the lower alignment brackets, **[3]** tightening or untightening the screws into position as needed. With the screw slightly tightened, move the panel sideways to align it to the other panels on the unit or other adjacent structures.

> Depth alignment: working from the inside of the drawer, after lifting up the magnetic seal, adjust the panel position so it is closer to or further away from the door using the holes **[4]** and then secure the panel using the holes **[5]**.

> Hook the panel to the fixing devices starting from the top aligning brackets **[6]**.

> At this point, alignment between the panel and adjacent cabinets can be adjusted using the alignment brackets and small brackets **[7]** and **[8]**.

> Vertical alignment: tighten or loosen the screw in the brackets to raise or lower the panel **[9]**.

> Depth alignment: working from the inside of the door, after lifting up the magnetic seal, adjust the panel position so it is closer to or further away from the door using the holes **[10]** and then fix the panel in position using the holes **[11]**.

Once the front panel has been adjusted, check that the gasket has been repositioned correctly to assure the door/drawer are closing correctly and avoid operational errors of the unit.

5.1 Built-in installation single appliance

For a built-in installation, to close gaps between the appliance and the adjacent cabinets, special side profiles and PVC covering frames are provided.

Operate as follows:

- > Push the appliance into the installation niche [1].

1

> If the unit is to be installed inside a niche or within an enclosed structure, it is necessary to design a ventilation shaft at the back of the niche to assure proper ventilation at the back of the unit. A 5 mm gap is sufficient to prevent overheating. Always mount front panels on door and drawer before pushing the unit into its final position inside the niche or structure.

> Secure the appliance to the adjacent cabinets by fixing to these the side profiles previously mounted on the appliance [2].

To make this operation easier keep the door and the drawer open.

> Check the levelling of the appliance, adjusting its feet and wheels to correct it.

2

> Mount the profiles the covering frames: first insert them laterally and then push firmly until a "click" is heard [3].

3

Side profiles mounting:

- A** PVC connecting element, alternatively: **C** plastic connecting brackets
- B** Alluminium frame

5.2 Built-in installation two or more appliances

Required accessories to be ordered separately:

- > Central connection Kit (KCC)

Special side profiles and PVC covering frames are provided for closing gaps between the appliance and the adjacent cabinets.

B04017900 Union kit

5. INSTALLATION

Operate as follows:

> Position the appliances in front of the installation area, leaving enough space to operate at their back [1].

> Move at the back of the appliances to mount the joining brackets: fix on side of the top and lower brackets to one of the appliances and subsequently to the other [2].

> Place the two units side by side and join them at the front attaching the profiles with the supplied screws [3].

> Finish off by mounting the central cover frame onto the central profiles, by pushing it until a click is heard [4].

> Once completed the previous steps, push the units in their final position [5].

If the units are to be installed inside a niche or within an enclosed structure, it is necessary to design a ventilation shaft at the back of the niche to assure proper ventilation at the back of the unit of about 20mm. Always mount front panels on door and drawer before pushing the unit into its final position inside the niche or structure.

> Check the levelling of the appliance, adjusting its feet and wheels to correct it.

> Secure the appliance to the adjacent cabinets by fixing to these the side profiles [6]. To make this operation easier keep the door and the drawer open.

> Mount the covering frames onto the profiles, first insert them laterally and then push firmly until a "click" is heard [7].

Side and central profiles mounting:

A - Side connection profile in PVC.

B - Aluminum cover frame

C - Central covering frame in aluminum

5.3 Free-standing installation two or more appliances

Required accessories to be ordered separately:

> Central Connection Kit (KCC)

> Freestanding Kit

Aluminium profiles can be used to close the spaces between the appliance and adjacent structures.

Operate as follows:

- > Position the appliances in front of the installation area, leaving enough space to operate at their back.
- > Peel off the self adhesive protection and apply the insulated anticondensation panel to the side of one appliance [1].

- > Move at the back of the appliances to mount the joining brackets: fix one side of the top and lower brackets to one of the appliances and subsequently to the other [2].

2

- > Place the two units side by side and join them at the front attaching the two profiles with the supplied screws [3].

- > Finish off by mounting the central cover frame onto the central profiles, by pushing it until a click is heard [4].

4

- > Attach the side panels to the unit, mounting them on the side profiles [6]

5

5. INSTALLATION

> Attach the aluminum cover [6] to each side profile, pressing onto them until they 'click' together.

6

> Mount the top panel [7] on top of the unit, using the screws provided with the kit.

7

> Adjust the height of the unit with the leveling feet and the back wheels.

Side panels and central profile mounting

- A - Side connection profile in PVC.
- B - Aluminum cover frame
- C - Central covering frame in aluminum

5.4 Maximum cabinet depth over "Integrated" refrigerator with single door panel

It is possible that the design of the kitchen and, in particular, of the niche where the "Integrated" refrigerator is going to be fitted includes a cabinet right above the refrigerator itself that must be closed with the same panel mounted on the Integrated refrigerator door."

In this case, **the total depth of the cabinet without the door (above the refrigerator) must not exceed the total depth of the refrigerator itself [1].**

This will allow the panel attached to the refrigerator door to open correctly without interference during its rotation up to 105°.

1

6.1 Anti-tipping safety assembly

To prevent the appliance from tipping over an extra-long kit is available up on request if the appliance needs to remain distanced from the wall, it is mandatory to install two brackets on the upper part of the appliance for fixing it securely to the wall.

Operate as follows:

> The brackets should be applied as illustrated using the provided screws and expansion plugs. Place a bracket on the top of the appliance in correspondence to the fixing holes and against the wall [1].

> Mark up the holes position on the wall [2].

> Drill the wall with an 8 mm (3/8") bit and insert the expansion plug [3].

B04000200 Anti-tip kit

> Reposition the bracket and fix it first to the cabinet and then to the wall [4].

To avoid danger of the appliance tipping over it is mandatory to secure the appliance to the wall by means of two special brackets.

6.2 Mounting the handles on stainless front

To mount the handles onto the door and the drawer operate as follows:

Operate as follows:

> Insert the two handle spacers onto the supports already available on the door and the drawer [1].

6. COMPLETING THE INSTALLATION

> Screw in the Allen screws available on the handle **[2]**.

The screws must be tightened in by means of a 2.5 mm (1/8") hex wrench.

6.3 Ventilation and Plinth

INTEGRATED AND CLASSIC SERIES

In the event that the design of the environment provides for the installation of a front plinth to unify the overall view, **it is necessary to use a perforated plinth to ensure proper ventilation of the equipment.** The drawings below indicate, for each width available in the Integrated series, the size of the area and the percentage of surface to be drilled; the type of drilling (vertical or horizontal grid, for example) remains at the discretion of the designer.

Ventilation is ensured by a forced air system through a grid positioned in the lower part of the equipment. **If a front plinth is provided, it must provide an opening to ensure proper ventilation of the equipment as per drawing.** The type of drilling of the front plinth (eg vertical or horizontal slots) is at the discretion, however, it must guarantee an open surface equal to 50% of the total.

In this case, to further improve ventilation, it is suggested to remove the original grille. The ventilation grille is magnetically fixed to the equipment and can be easily removed, even by the user, to check and clean the condenser from any accumulation of dust.

The ventilation grille must not be blocked or covered in any way. It also needs to be dusted / cleaned regularly.

	SERIE 899	SERIE 749	SERIE 599	SERIE 449
A	860 (33 7/8")	710 (27 15/16")	560 (22")	410 (16 1/8")

Series: County

Series: Classic

Series: Integrated

Series: Brilliance Classic

Series: Brilliance Integrated

Based on the adjustment of the feet and the height of the panel from the floor, the customer defines the perforated plinth to be installed on the equipment.

6. COMPLETING THE INSTALLATION

X-PRO SERIES:

Ventilation is insured by a forced air system through a grille located in the upper part of the appliance. This grille should never be covered by panels or any other devices that could reduce its efficiency. Please refer to page 5-6 to ensure correct air circulation.

6.4 Post installation control

- ✓ Check that the front levelling feet have been properly installed.
- ✓ Check that the connection to the water system does not have any leaks and that the closing tap is easily accessible.
- ✓ Check that the electrical connection is correctly installed and that the multipole switch and socket are easily accessible.
- ✓ Check the perfect alignment of the appliance with adjacent structures.
- ✓ Check that all adhesive tape and external or internal temporary protective devices have been removed.
- ✓ Check the perfect closing of the doors and the smooth sliding of the drawers and shelves.

6.5 Start up

> To start the appliance, connect the plug to the electrical mains: at this point, when opening the door, the control panel will usually visualize the message "Stand by", and all the panel keys be off

Stand by

> To turn on all the appliance compartments, press the Unit  button for three seconds. The display will show the message "Initial test" for approx. 2 minutes. After this phase the compressors will start up and remain on until the default temperature set up in the factory is reached. Do bear in mind that this condition could last several hours. If the appliance is provided with an Ice Maker, prior to switching it on make sure that the water filter cartridge is installed, then fill the water system. To this purpose switch off the Ice Maker and perform a manual clean procedure. At the end switch the Ice Maker on again by touching the  button.

> For further information about the appliance operation, refer to the User Manual.

 If at the first start - up the message **Stand by** does not appear, but other messages appear, such as **Fridge too warm**, **Fresco too warm**, **Freezer too warm**, or sound signals are activated, it means that the appliance has already started the cooling process. If this is the case, deactivate any possible acoustic signals by pressing the **Alarm** button, close the door and wait until the set temperature is reached.

 **It is necessary to let the unit reach the correct temperature before foods are stored inside.**
